EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Thomas E. McKiernan on 9/8/11.

The application has been amended as follows:

Claim 2 is amended as follows:

In line 1, after "A reservation acceptance system", insert the following phrase:
"running on a processor,"

In line 22, after "an existence decision portion that determines", insert the following phrase: ", using the processor,"

Claim 6 is amended as follows:

In line 1, after "A reservation acceptance system", insert the following phrase:
"running on a processor"

In line 17, after "an existence decision portion that determines", insert the following phrase ", using the processor,"

Claim 13 is amended as follows:

In line 1, after “A reservation acceptance system”, insert the following phrase:
“running on a processor”

In line 10, after “an existence decision portion that determines”, insert the following phrase “, using the processor,”

Allowable Subject Matter

2. Claims 2, 6, 11-16 are allowed.

3. The following is an examiner’s statement of reasons for allowance. None of the prior art of record either individually or in combination teach the following:

-an area information storage portion that stores, therein, area information that defines a plurality of areas having different sizes around a provision position of a service, each of the plurality of areas corresponding to an amount of demand of the service and having a larger size as the amount of demand of the service is smaller.

-a reservation acceptance processing portion that accepts a reservation of the service for the customer, who sent the request information if the existence decision portion that determines that the current position of the customer is included in the acceptance area, and does not accept the reservation of the service for the customer unless the current position of the customer is included in the acceptance area.

The present invention discloses a reservation acceptance system. The first allowable feature of providing “an area information storage portion that stores, therein, area information that defines a plurality of areas having different sizes around a

Art Unit: 3628

provision position of a service, each of the plurality of areas corresponding to an amount of demand of the service and having a larger size as the amount of demand of the service is smaller” is not disclosed by any prior art reference. The closest prior art, Barnes et al (US 2003/0065805 A1) shows a system, method, apparatus and computer program product for providing location based functions and mobile e-commerce where functions are based on location data, to facilitate commercial exchanges by wirelessly exchanging payment and product information with venders, to identify services such as venders meeting selection criteria, to wirelessly exchange select information with other users and systems, to restrict and/or monitor the use of the device based on authorized user parameters, selecting one of a plurality networks through which to communicate, detecting a trigger for performing an action based on a change in location and sensed data, storing a voice annotation with a computer data file, determining service providers and associated communication parameters, contemporaneously maintaining a wireless voice and data link, providing a system for selecting and delivering mobile advertisements, and many other functions and services. The next closest prior art, Murashita et al (US 2002/0062236 A1), discloses a reservation server which comprises a retaining section for retaining store/facility information including a reservation-needed service and a reservation situation, a network terminal for outputting alternative event substituting for the service, a receiving section for receiving a desired service, a reservation managing section for selectively reading out the store/facility information and the alternative event, and a transmitting section for transmitting the information and event. Accordingly, a service provider can notify a user of a service and reservation

Art Unit: 3628

situation of a store-near the user or the start/end time of the service, and the time to be taken for the service and can suggest an alternative event in a time zone convenient to the user. However, Barnes et al and Murashita et al both fail to disclose the feature of providing “an area information storage portion that stores, therein, area information that defines a plurality of areas having different sizes around a provision position of a service, each of the plurality of areas corresponding to an amount of demand of the service and having a larger size as the amount of demand of the service is smaller”. This distinct feature has been added to independent claims 2, 6, 13, 16 and renders them and all claims that depend from them allowable.

The second allowable feature of providing “a reservation acceptance processing portion that accepts a reservation of the service for the customer, who sent the request information if the existence decision portion that determines that the current position of the customer is included in the acceptance area, and does not accept the reservation of the service for the customer unless the current position of the customer is included in the acceptance area” is not disclosed by any prior art reference. The closest prior art, Barnes et al (US 2003/0065805 A1) shows a system, method, apparatus and computer program product for providing location based functions and mobile e-commerce where functions are based on location data, to facilitate commercial exchanges by wirelessly exchanging payment and product information with venders, to identify services such as venders meeting selection criteria, to wirelessly exchange select information with other users and systems, to restrict and/or monitor the use of the device based on authorized user parameters, selecting one of a plurality networks through which to communicate,

detecting a trigger for performing an action based on a change in location and sensed data, storing a voice annotation with a computer data file, determining service providers and associated communication parameters, contemporaneously maintaining a wireless voice and data link, providing a system for selecting and delivering mobile advertisements, and many other functions and services. The next closest prior art, Murashita et al (US 2002/0062236 A1), discloses a reservation server which comprises a retaining section for retaining store/facility information including a reservation-needed service and a reservation situation, a network terminal for outputting alternative event substituting for the service, a receiving section for receiving a desired service, a reservation managing section for selectively reading out the store/facility information and the alternative event, and a transmitting section for transmitting the information and event. Accordingly, a service provider can notify a user of a service and reservation situation of a store-near the user or the start/end time of the service, and the time to be taken for the service and can suggest an alternative event in a time zone convenient to the user. However, Barnes et al and Murashita et al both fail to disclose the feature of providing "a reservation acceptance processing portion that accepts a reservation of the service for the customer, who sent the request information if the existence decision portion that determines that the current position of the customer is included in the acceptance area, and does not accept the reservation of the service for the customer unless the current position of the customer is included in the acceptance area". This distinct feature has been added to independent claims 2, 6, 13, 16 and renders them and all claims that depend from them allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
